WX5 File Manager

The image converter and PDF Editor for Incomedia WebSiteX5

Central image management

For each of your WebSiteX5 projects, *WX5 File Manager* shows you previews and library information of all supported image and video files stored in the project. This allows you to centrally extract the original files, convert the preview to another graphic format or replace them with another image of the same size and format. BMP, JPG and PNG images can be rotated and mirrored or you can select any quantity of these files to automatically apply a watermark.

Central PDF management

WX5 File Manager filters and lists up separately all PDF documents contained in the WebSiteX5 project. Open the PDF Editor with a double click to easily and rapidly modify its page composition and update or replace the document.

Project optimisation

Use *WX5 File Manager* to optimise your WebSiteX5 project by removing obsolete files stored in WebSiteX5. Just by limiting the number of backups automatically created by WebSiteX5, you can reduce the project's disk space up to 90%.

Application

- Architecture: 64 bit
- License: perpetual

User interface

- English, French, Italian, German
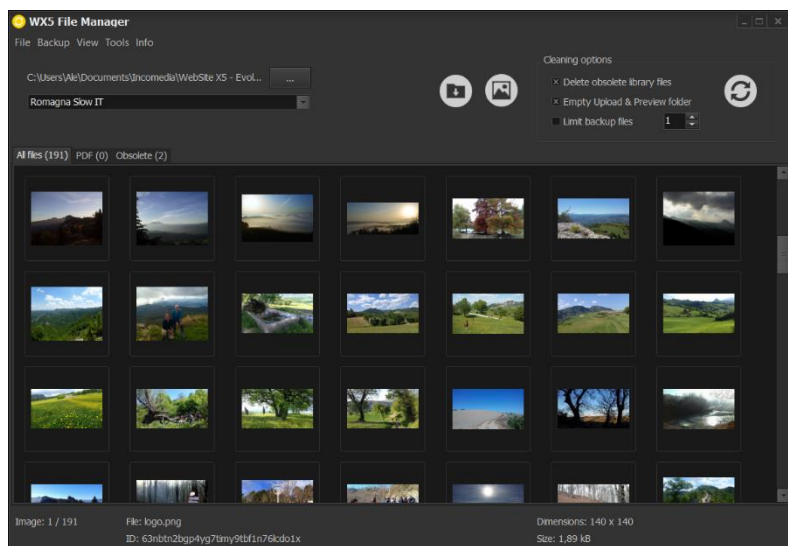

Supported formats for file preview

- Image: BMP, GIF, ICO, JPG, PNG, TIF
- Document: PDF
- Video: AVI, MOV, MP4, MPG, OGG, WEBM, WMV
